

Data Care Manager

Jan Trnka, CEO

Data quality is big issue!

Various problems:

- Wrong values
- Too many data
- Unclear ownership
- Multiple sources
- Multiple meaning
- Different structures
- Cumbersome structures
- Not up-to-date
- •

- human factor
- redundancy
- responsibility
- divergence
- semantic
- syntax
- complexity
- timing

Approaches to maintain data

• Typical: do nothing

• Classical: secretary does

• Modern: let other do it

• Innovative: take DCM

- ignore it

- delegate it

- outsource it

- automate it

Data maintenance is something nobody wants to care about. So we do!

12 November 2007

Maintenance Automation

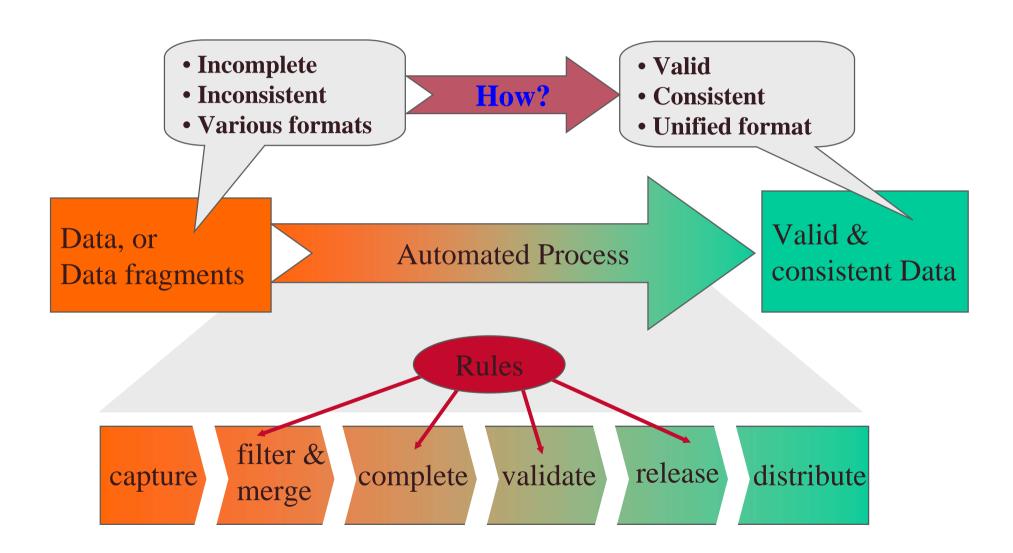

Simple idea:

- 1. Define maintenance rules
- 2. Let computer do the job
- 3. Supervise the execution
- 4. Maintain exceptions only

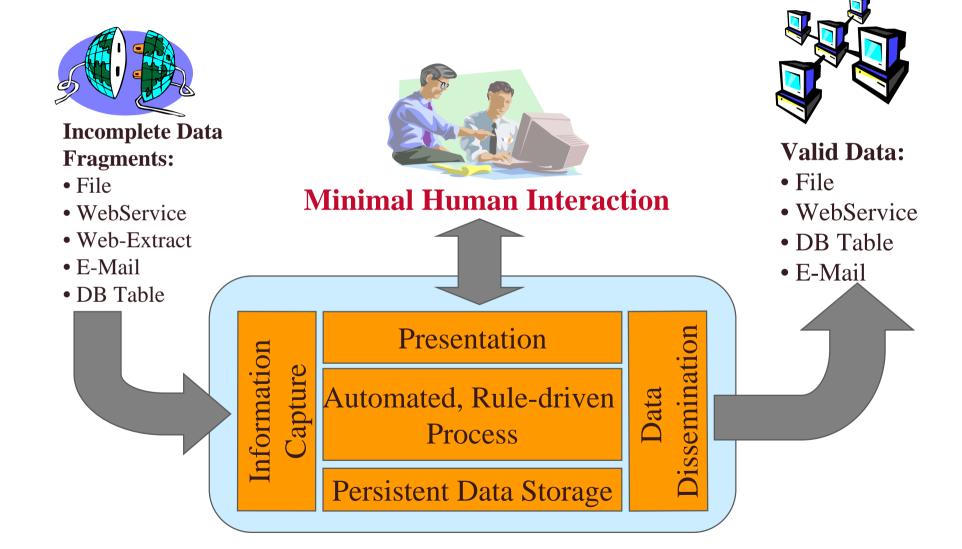

Rule Based Data Maintenance

Schema

Features

- Automated process, minimal user interaction to:
 - handle exceptions
 - supervise the process
- Rules are separated from software code
 - process changes are implemented quickly
 - simple to edit, test, manager and deploy
 - business user is the functional owner
- Keeps incomplete data for later improvement
 - Active data quality improvement
- Integrates smoothly in any existing IT landscape

Commercial Background

- Composite Product (Caché, Java, Tomcat, VisualRules, Screen Scrapper, Log4Cache ...)
- Available on any platform running Caché
- Product & services offered by STABILIT as projects
 All products licenses are included in the project

References

EUREX - SDPP (Static Data Pre-Processing) www.eurexrepo.com

Preparation of financial data from providers into a uniform data base suitable for the trading systems.

Functions

- Consolidation of data from Bloomberg and Swiss Federal Bank
- Validation of all data according to business rules
- Automatic dissemination into the trading platform

· Benefits:

- Opening of new financial market (SecLend) (data increase by factor 10)
- Cost saving
- Degree of automation = 95%

Why Data Care Manager?

Benefits at a glance:

1. Save effort & time

- ⇒ by eliminating manual data maintenance
- ⇒ by handling only exceptions, not regular cases
- ⇒ by automating maintenance process

2. Increase data quality

- ⇒ By eliminating human factors
- ⇒ By enforcing business rules
- ⇒ By introducing a central data validation place

3. Up-to-date data

⇒ By periodic data processing and checking at any date time

Do you need Data Care Manager?

Simple criteria:

- Is data maintenance an overwhelming effort?
- Do you have high data volume?
- Do you need up-to-date data?
- Is data quality critical to your business?

It's not about how many ideas you have,

but how many you make happen!
